

MissK-30 Tailfins

In the kit is a choice of 3 different styles for tailfins that match with the different Karelson Low-Profile hull liveries.

Select a choice and trim with a hobby knife the outside edges.

Then carefully block sand each tailfin half until it is flat on the inside.

Glue the fin halves together. Filling the fin cavities with expandable foam or other material is recommended to get more of a surface to glue for each half. Test fit to rear cowl. Finish and paint as desired.
