

# Miss K/TIMEX Windshield

Your kit will include clear material to trim and form from a paper pattern

Trimming out the pattern:

Wear soft cotton gloves. Score with a very sharp hobby knife just inside the marked lines and carefully snap the excess material away.

Wrapping around cowl:

The method that seems to work best is to center the flat windshield on the cowl and gently apply heat with a hair drier or heat gun near the dotted line area. Apply heat and gradually wrap the windshield around the cowl until the windshield closely matches the photo. Slow repetition of heat and wrapping should make a decent windshield.
